

Minisart® Syringe Filters for HPLC Sample Preparation

Sartorius Minisart® with a Polypropylene (PP) Housing are Available in a Choice of Membranes:
Hydrophilic Regenerated Cellulose (RC), Nylon (PA) or Hydrophobic PTFE

The purpose of using syringe filters for sample preparation prior to analysis is to protect analytical equipment and columns. Sartorius Minisart® PP filters reliably remove particles from your samples without adding unwanted extractables or leachables.

HPLC Procedure

Column C18: 250 × 4.6 mm, Flow Rate: 1 ml/min, Wavelength: 210 nm
HPLC Injection Volume: 20 µl, Analysis Time: 65 min, Temperature:
40°C, Mobile Phases: A) Acetonitrile | B) Water, Gradient: Hold 60% A
for 10 min | 60% to 95% A in 20 min | 95% to 100% A in 35 min

Reliable and Ultrapure

Clean & Green

Our regenerated cellulose (RC) membrane used in Minisart® RC, our nylon (polyamide) membrane incorporated in Minisart® NY and our coating-free hydrophobic PTFE membrane used in Minisart® SRP are exceptionally pure compared with other common filter membranes.

* Sterile Minisart® are individually packaged and have been sterilized by ethylene oxide (EO). Not presterilized Minisart® can be sterilized by autoclaving at 121 °C for 30 min | or by using EO. Non-sterile RC Minisart® types are optimized for sample preparation and are not suitable for sterile filtration according to the bacteria challenge test.

¹ GF prefilter: Ultrapure glass fiber with 0.7 µm particle retention on top of the nylon membrane.

Would You Like to Use Other Membranes?

- Minisart® High Flow with polyethersulfone (PES) is optimal for filtration of additives and cell culture buffers. Due to the asymmetric membrane structure, the PES surface almost behaves like a pre-filter and enables high flow rates
- Minisart® NML (SFCA - Surfactant-free Cellulose Acetate) for sterile filtration and clarification of aqueous solutions

Sartorius offers a full range of syringe filters dedicated for various filtration applications.
